

Battery Operated

Up to 2km wireless DMX control

# Fledged

## The Chick leaves the Nest

At large outdoor events you need many sources of fog to be able to compete against the wind. The amount of fog is of secondary importance: as long as some machines are pointing in the right direction, a comprehensive, reliable fog coverage is guaranteed. A powerful fan will help direct the mist into the desired area.

Fog and wind machines are power hungry. The electrical infrastructure is often more complex than that of the actual effects devices. A power supply at the ideal positions is often not possible at all.

From all these considerations an innovative fog concept has emerged. *Fledged* can be set up anywhere and is completely independent of mains connections or control lines. *Fledged* starts heating when you request for fog and starts fogging after only 1 second. The amount of mist and the fan speed can be set precisely. At the end of the event you can send all *Fledgeds* to sleep mode by your console so that the battery is completely disconnected from the consumers.

- ▶ 1 hour continuous operation or 200 x 10sec. shots at full output
- ▶ 2km radio range
- ▶ High quality fog module made in Germany
- ▶ Professional sturdy flight case
- ▶ Including battery charger and W-DMX Transmitter
